

Ordinal rankings do not identify cardinal allocations

a Which objects are needed for each allocation claim?

Rank disagreement	•	—	—	—	—	—
Possible reversal	•	•	•	•	•	—
Universal reversal	•	•	•	•	•	—
Selected reversal	•	•	•	•	•	•
	Ordinal rank	Cardinal payoff	Joint risk	Feasible set	Optimal face	Selection rule

b Observability is not identification

c The full optimal face, not one solver output, determines set-valued reversal
