

a

Exact two-crop geometry

Feasible set: $x_C + x_S = 1$

Reversal: $x_C - x_S < 0$

Possible: $\min_{x \in X^*} (x_C - x_S) < 0$

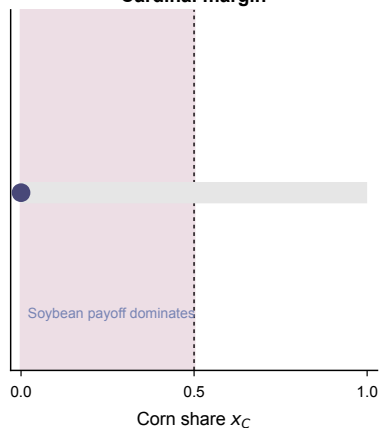

Universal: $\max_{x \in X^*} (x_C - x_S) < 0$

Selected: $x_C^* - x_S^* < 0$

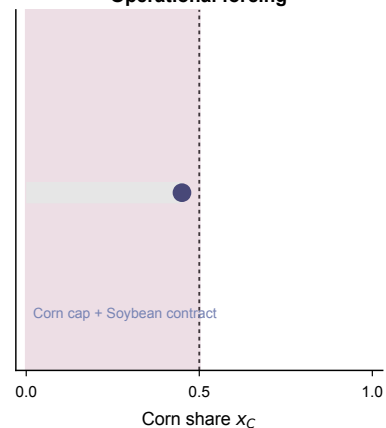

The same ordinal ranking admits each case at right.

b

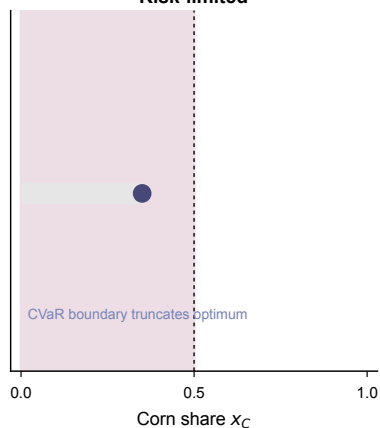

Cardinal margin

**c**

Operational forcing

**d**

Risk-limited

**e**

Set-valued optimum
