

Definition, transition and sample sensitivity in the official-data panel

a Ranked state distributions reveal definition sensitivity

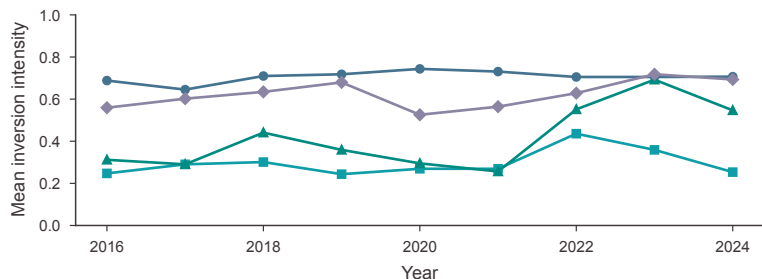

b

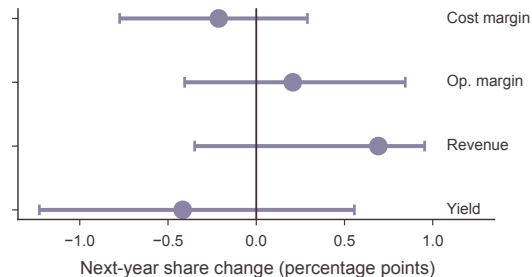

Operating-margin definition; white = outside panel

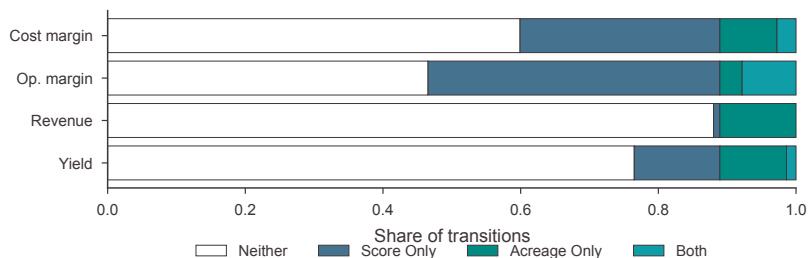

c Annual paths are not stable across definitions

d Lagged associations remain unresolved

e Transition structure (217 events per definition)

f Sample and interpretation boundary

31 states **248 state-years** **651 crop transitions**
 2016–2024 complete cases per definition

Descriptive compatibility ≠ identified mechanism
